# When it comes to growing onion, garlic and groundnut, we're in the root.

We put our brain to farming. Experimenting with new concepts in scientific agriculture. And evolving better techniques to accelerate the rate of production.

And when we put our brain to farming, we're not confined just to laboratory doors. Education programmes, field demonstrations and exhibitions are an extension of our activity.

For improved, scientific farming of onion, garlic and groundnut, our highly qualified and trained specialists are at your service, round the clock. Tell us if you need their services.
